§1 Site Overview & Routes

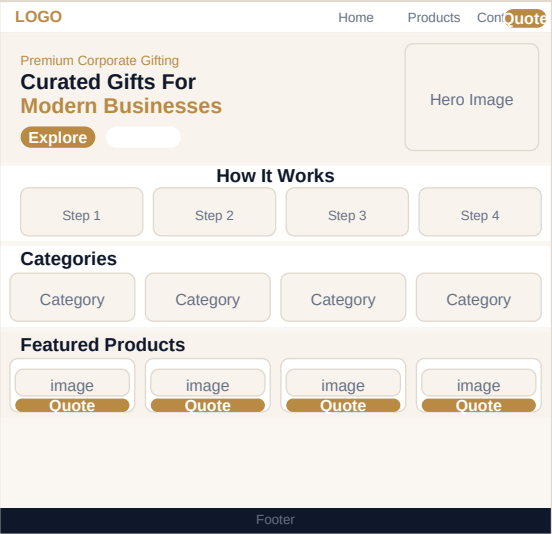

AM Global Hub is a premium corporate gifting website for businesses in India. It allows visitors to browse products, request quotes via a WhatsApp-integrated modal, and contact the team directly. A protected admin dashboard enables the owners to manage products, categories, and homepage content without any coding.

Route	Type	Auth	Description
/	Page	No	Homepage — hero, categories, featured products, how it works
/products	Page	No	Full product catalogue with search and category filters
/products/[slug]	Page	No	Individual product detail page
/categories/[slug]	Page	No	Products filtered by a single category
/contact	Page	No	Contact form, team info, WhatsApp, Instagram, map
/admin/login	Page	No	Admin login form
/admin	Page	Yes	Admin dashboard (protected by session cookie)
/api/admin/login	API	No	POST — validates credentials, sets httpOnly cookie
/api/admin/logout	API	Yes	POST — clears session cookie

■ All `/admin/*` routes (except `/admin/login`) are intercepted by `Next.js` middleware. Unauthenticated requests are redirected to `/admin/login` automatically.

§2 Homepage (/)

The homepage is the main landing page. It is a Next.js server component that fetches live data from Supabase for categories and featured products. All other sections are static.

Homepage layout wireframe

Sections

- **Navbar** — fixed top bar with logo, navigation links (Home, Products, Contact) and a gold "Request Quote" CTA button. Fully responsive with a mobile slide-out menu.
- **Hero** — full-width section with headline, subtitle, stats (100+ clients, 1K+ orders), two CTA buttons: "Explore Collection" → /products and "Talk to Our Team" → /contact.
- **How It Works** — four-step process cards: Choose Products, Customize Branding, We Curate & Pack, Nationwide Delivery.
- **Categories** — live grid pulled from Supabase. Each card links to /categories/[slug]. Adding a category via /admin instantly appears here.
- **Featured Products** — live grid of products with featured = true in Supabase. Each card has a "Request Quote" button with the full quote modal. Section is hidden if no featured products exist.
- **Branding Section** — static section describing custom branding capabilities.
- **Footer** — dark footer with links, contact info, and category listings.

Data Sources

- Categories: `SELECT * FROM categories ORDER BY created_at ASC`
- Featured Products: `SELECT * FROM products WHERE featured = true ORDER BY created_at DESC LIMIT 8`

Navigation CTAs

- "Explore Collection" → /products
- "Talk to Our Team" → /contact
- "Request Quote" (navbar) → /contact

§3 Products Listing Page (/products)

A live catalogue page showing all products from Supabase with real-time search and category filtering. The server component fetches categories at request time; the client component handles filtering and search without full page reloads.

Products page wireframe

Layout Sections

- **Hero** — centred headline with gold badge, subtitle, and pill-shaped search bar with inline Search button.
- **Filter Bar** — sticky bar below the navbar with category pill buttons. Active category is highlighted gold. Scrolls horizontally on mobile.
- **Result Count** — shows "N products" or "N products in [Category]" above the grid.
- **Product Grid** — 2 cols (mobile) / 3 cols (tablet) / 4 cols (desktop).
- **Skeleton Loaders** — 8 animated placeholder cards shown while data loads.
- **Empty State** — icon, message, and "Clear filters" button if no results.

Product Card

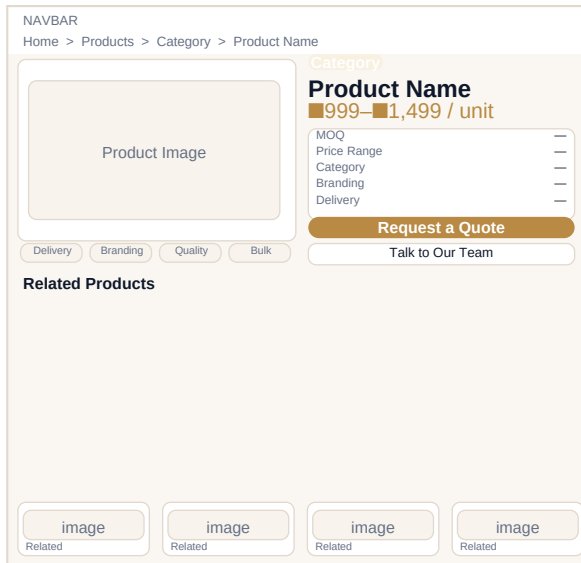

- Category label (gold, small caps) above the product name
- Product name — turns gold on hover
- Description preview (2-line clamp)
- Price range (bold) + MOQ below it
- "Featured" badge overlaid on image if applicable
- Arrow button fills gold on hover — entire card is a link to /products/[slug]

Search & Filter

- Search uses Supabase ilike query on the name column
- Category filter sets ?category= in the URL — shareable/bookmarkable
- Both can be combined: search within a specific category

§4 Product Detail Page (/products/[slug])

Each product has its own dedicated page at /products/[slug]. This is a server-rendered page that fetches the product and related products from Supabase on every request.

Product detail wireframe

Left Panel

- Large product image with hover-zoom (scale 1.03)
- Four feature badges below the image: Pan India Delivery, Custom Branding, Quality Assured, Bulk Orders

Right Panel

- **Category pill** — gold badge linking conceptually to the category
- **Product name** — Playfair Display font, large
- **Price range** — gold, bold, with "/ unit (varies by qty)" note
- **Description** — full product description text
- **Specification table** — MOQ, Price Range, Category, Custom Branding, Delivery timeline
- **"Request a Quote" button** — gold, full-width, opens the quote modal
- **"Talk to Our Team" button** — outline, links to /contact
- Trust note: "■ Your enquiry is confidential."

Related Products

- Up to 4 products from the same category (excluding current)
- Each card links to its own detail page
- "View all →" link to /products

■ If a slug does not exist in Supabase, the page returns a proper 404 (Next.js `notFound()`).

§5 Contact Page (/contact)

The contact page provides multiple ways for potential clients to get in touch. It is a client component with a live form, business details, and direct communication links.

The wireframe shows a contact page layout. At the top is a 'NAVBAR'. Below it is a gold accent heading 'We'd Love to Hear From You' with a subtitle 'Get in Touch'. The main content is divided into two columns. The left column is titled 'Send us a Message' and contains a form with fields for 'Full Name', 'Company', 'Email', 'Phone', and 'Message'. A 'Send Message' button is at the bottom of this column. The right column contains a sidebar with links: 'Meet the Team', 'Address', 'Phone', 'Instagram' (highlighted in pink), 'WhatsApp' (highlighted in green), and 'Hours'. At the bottom of the right column is a 'Google Maps Embed' placeholder.

Contact page wireframe

Hero

- "We'd Love to Hear From You" — gold accent heading with subtitle.

Contact Form (left)

- Fields: Full Name*, Company, Email*, Phone, Message*
- Loading spinner on submit, success confirmation screen
- Success state shows name acknowledgement and a "Send another" button
- Note: currently simulates submission — wire to Supabase or Resend to go live

Info Cards (right)

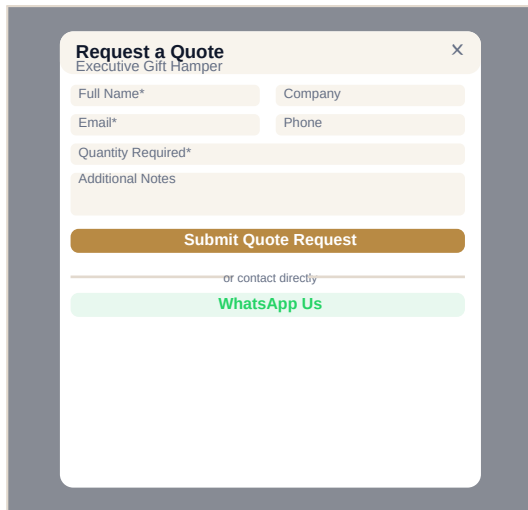

- **Meet the Team** — bio for Raman Oberoi and Akshit Oberoi
- **Address** — Cabin No. 4, A-201, Block A, Lajpat Nagar I, New Delhi 110024 with "Open in Google Maps" link
- **Phone** — +91 83687 72989, clickable tel: link
- **Instagram** — gradient card, links to @amglobalhub
- **WhatsApp** — green card with "WhatsApp Us" button (Akshit, +91 8168667321), pre-filled message
- **Hours** — Mon–Sat 10 AM–5 PM (Sat 10:30 AM); Sunday Closed. Today's row highlighted gold.

Map

- Google Maps iframe embedded, pinned to Lajpat Nagar I, New Delhi.

§6 Quote & WhatsApp System

A consistent quote request modal is used on both the Product Detail page and the Featured Product cards on the homepage. It collects enquiry details and offers a direct WhatsApp shortcut that pre-fills a message with all the form data.

A wireframe of a 'Request a Quote' modal. The modal has a title 'Request a Quote' and a subtitle 'Executive Gift Hamper'. It contains several input fields: 'Full Name*' (required), 'Company', 'Email*' (required), 'Phone', 'Quantity Required*' (required), and 'Additional Notes'. Below these fields is a 'Submit Quote Request' button. Underneath the button is a link 'or contact directly' and a 'WhatsApp Us' button. The modal is set against a dark grey background with a light grey border.

Quote modal wireframe

Modal Fields

- Full Name (required)
- Company
- Email (required)
- Phone
- Quantity Required (required)
- Additional Notes

Behaviour

- Triggered by "Request a Quote" / "Request Quote" buttons
- Full-screen backdrop with blur; click outside to close
- Loading spinner during submission
- Success screen with Done button + WhatsApp Us button
- Closing resets the form and success state

WhatsApp Integration

Tapping "WhatsApp Us" opens WhatsApp with a pre-filled message to **+91 8168667321** (Akshit). The message includes all filled-in form fields. Optional fields are omitted if blank.

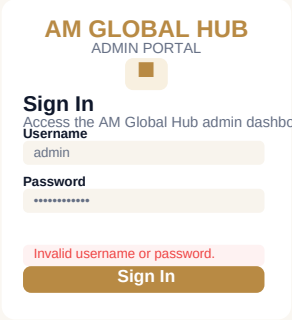

Example WhatsApp Message

Hi, I'd like to request a quote for the following product on AM Global Hub:

- Product: Executive Gift Hamper
- Name: Jane Doe
- Company: Acme Corp
- Email: jane@acme.com
- Phone: +91 98765 43210
- Quantity Required: 100 units
- Notes: Need logo branding on all packaging

■ Where the modal appears: `/products/[slug]` detail page and Featured Product cards on the homepage.

§7 Admin Login (/admin/login)

Login page wireframe

How to Log In

- Navigate to **/admin/login** in your browser
- Enter username: **admin**
- Enter password: **AmGlobalHub@123**
- Click **Sign In**
- On success, you are redirected to **/admin**

Session Details

- Session cookie lasts **7 days** — no re-login needed on the same device
- Cookie is httpOnly (not accessible by JavaScript)
- If already logged in, visiting **/admin/login** redirects straight to dashboard
- Invalid credentials show a red inline error message
- Password field has a show/hide toggle

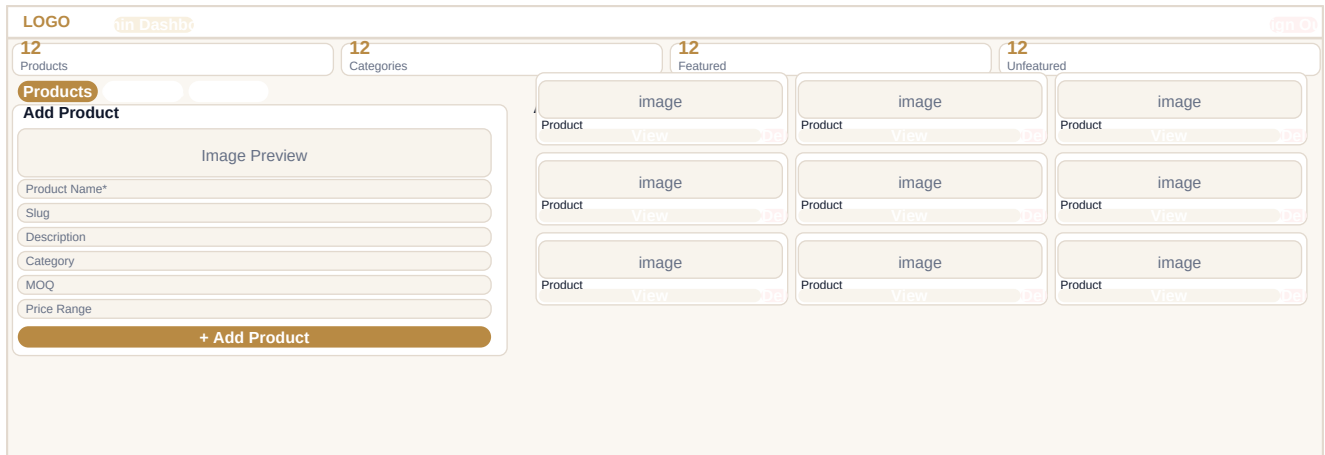

Changing Credentials

Edit the USERNAME and PASSWORD constants in:

```
src/app/api/admin/login/route.ts
```

§8 Admin Dashboard (/admin)

The admin dashboard is the control centre for the entire website. It has three tabs: Products, Categories, and Featured. All changes take effect in Supabase immediately and are reflected on the live site on the next page load — no deployment required.

Admin dashboard wireframe — Products tab view

Stats Row — always visible at the top

- Total Products — count of all products in the database
- Categories — count of all categories
- Featured — count of products currently showing on the homepage
- Unfeatured — products not currently on the homepage

Sign Out

- Click the "Sign Out" button (top-right corner) to clear the session cookie and return to /admin/login

§8a Tab: Products

This is the default tab. The left side shows the Add Product form; the right side shows a grid of all existing products.

Adding a Product

Field	Description	Required
Image URL	Paste any public image URL. A live preview renders above the field as you type. Fails gracefully if the URL is broken.	Yes
Product Name	Full display name shown on cards and the detail page (e.g. "Executive Leather Notebook")	Yes
Slug	Auto-generated from the name as you type. Click "Manual" to override. Used in /products/[slug]. Must be unique, lowercase.	Yes
Description	Shown on the product card (2-line preview) and the full detail page.	No
Category	Dropdown of existing categories. Determines which filter pill the product appears under.	No
MOQ	Minimum Order Quantity as a plain number (e.g. 50). Shown on the card and detail page.	No
Price Range	Display-only text string (e.g. ■999–■1,499). Not used for calculations.	No
Featured toggle	If ON, the product appears in the Featured Products section on the homepage.	No

Slug Rules

- Lowercase letters, numbers, and hyphens only — no spaces, no capitals
- Must be unique — two products cannot share a slug
- Used in the product URL: /products/
- Auto-mode generates from the name; click "Manual" to type your own

Example slugs

- ■ executive-leather-notebook
- ■ wireless-charger-pro-v2
- ■ Executive Notebook (has spaces and capitals)
- ■ wireless_charger (has underscores)

Managing Existing Products

- "View Page" — opens /products/[slug] in a new browser tab so you can preview the live page
- "Delete" — permanently removes the product from Supabase. The product disappears from all pages immediately.

■ *Deletion is permanent. There is no undo. The product is removed from all pages, the homepage featured section (if applicable), and the admin grid.*

§8b Tab: Categories

Categories control two things simultaneously across the site:

- The **filter pills** on the /products page — each category becomes a pill button
- The **Categories grid** on the homepage — each category appears as an image card

Adding a Category

Field	Description	Required
Image URL	Used as the cover image on the homepage category card. Landscape images (16:9) work best.	No
Category Name	Display name shown on the homepage card and the filter pill (e.g. "Executive Kits")	Yes
Slug	Auto-generated from the name. Used in /categories/[slug] and the ?category= filter param. Yes	
Description	Short text shown on the homepage category card below the name.	No

Effect of Adding a Category

- Immediately appears as a pill on the /products filter bar
- Immediately appears as a card in the Categories section on the homepage
- Accessible at /categories/[slug]
- Becomes available in the Category dropdown when adding/editing products

Managing Existing Categories

- "View Page" — opens /categories/[slug] in a new tab
- "Delete" — removes the category from Supabase, the homepage, and the filter bar

■ *Deleting a category does NOT reassign products that were linked to it. Those products will lose their category label and will not appear under any filter. You will need to manually reassign them via the Products tab by editing each product — or recreate the category with the same slug.*

Image recommendations for categories

- Format: JPG or PNG
- Aspect ratio: 16:9 or 4:3 — shown as a full-width cover image on the card
- Resolution: 1200×675px minimum for sharp display
- File size: under 500KB for fast loading
- Upload to Supabase Storage → copy the public URL → paste into Image URL field

§8c Tab: Featured

The Featured tab lets you control exactly which products appear in the "Featured Products" section on the homepage. Every product in the database is shown here as a card, regardless of whether it is currently featured or not.

How Featured Products work

- Products with featured = true appear in the "Featured Products" section on the homepage
- They also get a "Featured" badge overlaid on their image on the /products listing page
- The homepage section is hidden automatically if no products are featured
- There is no upper limit — you can feature as many products as you like
- Changes are reflected on the homepage on the next page load (no deployment needed)

Using the Featured Tab

- Products currently featured are shown with a **gold border and ring**, plus a gold "Featured" overlay on the image
- Products not yet featured have a plain white card
- Click **"Add to Featured"** (gold button) on any card to feature it
- Click **"Remove from Featured"** (red outline button) on a featured card to unfeature it
- The stat card at the top of the page updates immediately to reflect the new count

Action	What it does
Add to Featured	Sets featured = true in Supabase. Product appears on homepage on next visit.
Remove from Featured	Sets featured = false. Product is removed from homepage section on next visit.

■ *Tip: Use this tab to quickly refresh what appears on the homepage for seasonal campaigns or new arrivals — no need to re-add or re-configure products.*

§9 Technical Notes & Pending Work

Authentication

- Session stored as an httpOnly cookie named admin_session
- Cookie value is a static token — suitable for a single-admin site
- secure: true in production (NODE_ENV = production), SameSite: lax
- TTL: 7 days (maxAge: 60 × 60 × 24 × 7)
- Next.js middleware (src/middleware.ts) intercepts /admin/* and redirects unauthenticated requests to /admin/login
- To change credentials: edit USERNAME and PASSWORD in src/app/api/admin/login/route.ts

Supabase Tables

Table	Key Columns	Used By
products	id, name, slug, description, image_url, category_id, moq, price_range, featured, created_at	/products, /products/[slug], homepage, /admin
categories	id, name, slug, description, image_url, created_at	/products filter, homepage categories, /admin

Pending / Recommended Work

Item	Location	Priority
Wire contact form to real email/Supabase	src/app/contact/page.tsx → handleSubmit	High
Wire quote modal to store submissions	RequestQuoteModal.tsx + FeaturedProductCard.tsx → handleSubmit	High
Add Supabase RLS policies	Supabase dashboard → Authentication → Policies	High
Move admin credentials to .env.local	src/app/api/admin/login/route.ts	Medium
Add Edit Product functionality	/admin – Products tab	Medium
Add image upload via Supabase Storage	/admin – replace URL field with file picker	Medium
Add Edit Category functionality	/admin – Categories tab	Low
